**Overview**

The BT programmable self powered totaliser is specifically designed for computing & displaying totals from flowmeters or machinery with frequency, sine wave or pulse outputs.

The instrument simultaneously displays resettable (batch) total & a cumulative total in engineering units as programmed by the user.

Ultra low power consumption is a result of innovative design which provides as much as 10 years of service from the replaceable 3.6V lithium battery. The BT may also be externally powered by 8~24Vdc.

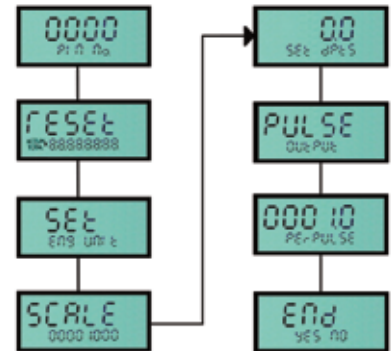

**Pulse Outputs**

The pulse output can be set as either a scaled or un-scaled pulse & is NPN/ PNP selectable.

The un-scaled pulse serves as a frequency amplifier for turbine or paddle wheel style flowmeters.

**Programming**

Simple PIN protected flow chart programming with English prompts guide you through the programming routine, greatly reducing the need to refer to the instruction manual.
